## DETAILED ACTION

### *Election/Restrictions*

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-8 and 15-23, drawn to an isolated compound which is a ligand of or otherwise interacts with a protein which comprises an amino acid sequence as set forth in SEQ ID NO: 2.

Group II, claim(s) 9, in part, drawn to an agonist of the isolated compound of claim 1.

Group III, claim(s) 9, in part, drawn to an antagonist of the isolated compound of claim 1.

Group IV, claim(s) 10 and 11, drawn to a method of identifying a ligand of the protein FIT.

Group V, claim(s) 12, drawn to method for modulating expression of genetic material encoding a FIT ligand.

Group VI, claim(s) 13 and 14, drawn to methods of modulating activity of FIT in a mammal.

2. The inventions listed as Groups I-VI do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The PCT rule defines special technical features as technical features that identify a contribution each of the claimed inventions, considered as a whole, makes over prior art. Claim 1 is anticipated by prior art. Claim 1 is drawn to isolated compound which is a ligand of or otherwise interacts with a protein which comprises an amino acid sequence as set forth in SEQ ID NO: 2. Dependent claim 8 identifies endophilins 1 and 3 as species of the generic product of Group I. Isolated endophilins were known in the prior art as disclosed by Tang et al., PNAS Vol. 96(22): 12559-12564 (of record). Therefore, claim 1 lacks a special technical feature and cannot share one with the other claims.

Group II recites the special technical feature, agonist of the isolated compound of claim 1, which is not required by the methods or the products of Groups I and III-VI.

Group III recites the special technical feature, antagonist of the isolated compound of claim 1, which is not required by the methods or the products of Groups I, II, and IV-VI.

Group IV recites the special technical feature, method of identifying a ligand of the protein FIT, which is not required by the methods or the products of Groups I-III, V, and VI.

Group V recites the special technical feature, method of modulating expression of genetic material encoding a FIT ligand, which is not required by the methods or the products of Groups I-IV and VI.

Group VI recites the special technical feature, method of modulating activity of FIT in a mammal, which is not required by the methods or the products of Groups I-V.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
